RECOMMENDED PLATFORM

OneStream

OneStream Software · Unified CPM

4.26 /5.00

HEADLINE

OneStream leads the board at 4.26/5.00, ahead of Anaplan by 0.10 points.

For a auto-components finance function, this ranking reflects a weighting toward non-functional requirements (19%) and technical fitment (19%). Anaplan remains a strong runner-up — a proof-of-concept with the top two is the recommended next step.

Why OneStream is recommended

- Strong performance in non-functional.
- Strong performance in feedback.
- Strong performance in business continuity.

Things to validate during PoC

- Relatively weaker in ease of use.
- Relatively weaker in functional fitment.

Methodology at a glance

Criteria evaluated	8 (top-3 weight: 19% / 19% / 19%)

14	Insight Software Insightsoftware	Financial Reporting	3.59 / 5.00	

Reading this table. Total score blends each platform's per-criterion score using the criterion weights you configured for this evaluation. Source weighting (Central / Analyst / Business User / Consultant / Influencer / OEM) is applied before the criterion blend, so every active rating source flows into one number.

Implementation effort

ESTIMATED MAN-DAYS

Planful can deliver this in 301 man-days — roughly 4 months with a team of 5.

Effort is calculated from project complexity (modules in scope, entities, integrations, customisation, data volume) blended with each vendor's implementation multiplier. Costs use a blended day rate of \$950–\$1,550 depending on vendor tier — exclude license, hardware, and internal staff time.

DRIVERS

Modules	2
Legal entities	12
Integrations	4
Users	150
History (yrs)	3
Customisation	3 / 5
Data volume	3 / 5
Geographies	2

FORMULA

TotalDays = BASE × ComplexityFactor × VendorFactor × Scope-Factor

BASE = 120 days (mid-complexity, single-module). Complexity factor 0.6–2.2 from the 8 drivers. Vendor factor is each vendor's implementation multiplier. Scope factor uses log(modules) for diminishing returns.

VENDOR	MULTIPLIER	MAN-DAYS	TEAM	CALENDAR	DAY RATE	EST. COST
Planful	1.2×	301	5	4 mo	\$1,019	\$306,719
Vena Solutions	1.3×	316	5	4 mo	\$1,037	\$327,692

Oracle Hyperion	3.0×	737	5	7 mo	\$1,553	\$1,144,561

Phase split (typical delivery shape)

10% Discovery & blueprint · 15% Solution design · 30% Build & configure · 18% Data & integrations · 12% Testing & UAT · 8% Training & change mgmt · 7% Cutover & hypercare

Source weighting

Each criterion blends up to six sources of input (6 active for this evaluation). Weights below sum to 100% and are applied before the criterion-level weighting.

Central review	35%
Analyst review	25%
Business user review	10%
Consultant review	10%
Influencer panel	10%
OEM self-rating	10%

If a source has no data (e.g. OEM hasn't submitted), that share is redistributed to the remaining active sources proportionally.

The score formula

For each platform p and criterion c :

$$\text{blended}(p,c) = \frac{\sum \text{source}(p,c) \cdot \text{weight}(\text{source})}{\sum \text{weight}(\text{source})}$$
$$\text{total}(p) = \frac{\sum \text{blended}(p,c) \times \text{weight}(c)}{\sum \text{weight}(c)}$$

All inputs are on a 0.00–5.00 scale; the total is therefore also 0.00–5.00.

Criterion weights for this evaluation

CRITERION	DESCRIPTION	WEIGHT	WEIGHT BAR
Feedback	Customer reviews, reference checks, and peer feedback	25%	
Functional Fitment	How well the platform meets your functional requirements	19%	
Technical Fitment	Architecture, integration, deployment, and data handling	19%	
Non-Functional Requirements	Performance, scalability, availability, and reliability	19%	
Security	Data security, compliance, and access control capabilities	13%	
Business Continuity	Financial stability, roadmap, and strategic direction	12%	
Ease of Use	User interface, learning curve, and adoption readiness	6%	
Market Presence	Market share, analyst rankings, and customer base	6%	
Software Support	Vendor support quality, SLAs, and community resources	6%	

Notes & caveats.

- Scores are derived from the central scorecard maintained by the Evaluation Engine team, blended with ratings submitted by your evaluation panel and (where available) the vendor's own self-assessment.
- Implementation man-day estimates are indicative — actual delivery effort depends on partner choice, in-house capability, and scope changes during discovery.
- This report is generated dynamically — re-export after changing weights, ratings, or drivers to capture the latest view.
